DETAILED ACTION

Election/Restrictions

1. The restriction requirement imposed on 7/21/08 is withdrawn by the examiner.

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:
 - 1. Determining the scope and contents of the prior art.
 - 2. Ascertaining the differences between the prior art and the claims at issue.
 - 3. Resolving the level of ordinary skill in the pertinent art.
 - 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.
- 4. Claims 1-4, 6, 7 and 9-29 are rejected under 35 U.S.C. 103(a) as being unpatentable over Weber et al. 6,784,233 Murschall et al. 6,841,222 in view of Murooka et al. 6,677,031.
- 5. Weber et al. disclose a masterbatch of polybutylene terephthalate and Irgafos PEPQ in column 16, lines 10-20, mica in the paragraph overlapping columns 13 and 14 and talc in column 14, lines 42 and 67. See also claim 1. Talc is an "other additive". Murschall et al. teach a sealable, flame-retardant, biaxially oriented polyester film in claim 1, phosphorus compound as a flame retardant in claim 15, masterbatching the

Art Unit: 1796

flame-retardant in claim 24, phosphoric esters in column 7, line 32 and talc as antiblocking agent in column 7, line 35. The particle size is 1-5 microns (column 7, lines 58-62). The concentration of the antiblocking agent is 0.1-1% (claim 28).

Copolyester outer layer is shown in claim 27 and gloss measurements can be found in Table 1. Murooka et al. recite a multilayer film comprising mainly polyester and 0.001-05% inert particles in claim 1, calcium phosphate and talc as inert particles in claim 14 and biaxially oriented film in claim 19. It would have been obvious to use the phosphate concentration Murooka et al. in the primary references, since they are similar compounds used for similar purposes. It also would have been obvious to one having ordinary skill in the art, at the time the invention was made, to select applicant's claimed ingredients from a list of equivalents. Gloss, semi-gloss and matte surfaces are design choices and as such they are also obvious.

Allowable Subject Matter

- 6. Claims 5 and 8 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Peter Szekely whose telephone number is (571) 272-1124. The examiner can normally be reached on 6:10 a.m.-4:40 p.m. Tuesday-Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Harold Pyon can be reached on (571) 272-1498. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
